

# WORLD HEALTH ORGANIZATION

## INTRODUCTION

The committee started with a Lobby time of 20 minutes, where the delegations discussed about topic B: The IHR international frameworks regarding the pandemic of 2020, the COVID-19. Furthermore, a moderated crocus of about an hour started. The delegations such as India and Israel made an intervention inviting the delegations of USA to speak about the IHR since it was one of the most affected countries around the globe.

## DEVELOPMENT OF THE MODEL

During the moderated crocus, the delegations debated about how the pandemic affected significantly their country in different aspects; The economy, the collapse of medical services and the great number of deaths this lethal virus caused. Additionally, all the delegations agreed that the implementations given by IHR were highly deficient due to incomprehension regarding the communication between the nations and the WHO. The delegations exposed several statistics of either cases of infections or numbers of people deceased of the year 2020 and even cases from 2021, 2022, 2023 and 2024 and it is completely alarming that some ciphers did not change at all during the pass of the years. Some delegations such as India, Afghanistan and China strongly stated that the implementations given by the IHR were definitely not effective for their country and had major consequences on the future; In the other hand, delegations such as Israel, France, Cambodia and Germany stated that the IHR implementations did work for their countries but not in an efficient way.

## CIERRE

As an overall, since all countries agreed that the IHR implementations were highly deficient, all delegations made a single working paper with common thoughts and ideas; some examples are to provide monetary resources for the most affected countries during COVID 19 to strength once again the public medical services, the monthly supervision of the WHO regarding the development of the epidemics and lastly, prevent the misinformation between all nations. These were some proposals given by all delegations to prevent future sanitary crisis (such as preventing the monkeypox becoming a pandemic).
